Aims until end of May

- **Desing a possible solution ; (for April 27)**
- **Implement this for solving your problem (first version May 4) ;**
- **Second version with improvements and results (May 11) ;**
- **Report this research propely and results comparisons (May 18) ;**
- **Organize it as a conference paper (May 27) to be submitted in some conference of Signal and Image as:**
  - **35th SIBGRAPI 2022 (Natal – July 3) !**
  - **Or (** CLEI SLCGRVPI 2022 - Latin America Simposium of Computer Graphics, Virtual Reality and Image Processing)

ok ! so...

What we will do together here in next classes of this semester?

We will discuss your work together, to learn by doing

For next Wednesday :

bring the answer for these

Features computation (why they are chosen)

Steps that will be follow in the **processing phase** .

What is considered a **solution** for the initial problem

What is the **input** ?

How is the **output** ?

How will be the **evaluation** of the soution ?

What will be the **computational tools to be used ?**

And present they, during the class time , for us consider together their viability !

Your presentation must be included in our classroom (code: a7giqcr) as a ppt .
