

Concluding the implementation done and how you are going to report your work

11 May 2022

How each of the group works are?

Lets put a **useful end** and conclusion in them !

How will be the **form you** will use to report them ? (suppose you are submitting to a conference, for example !)

We have a week to do this

Then:

Lets see your stage up now....

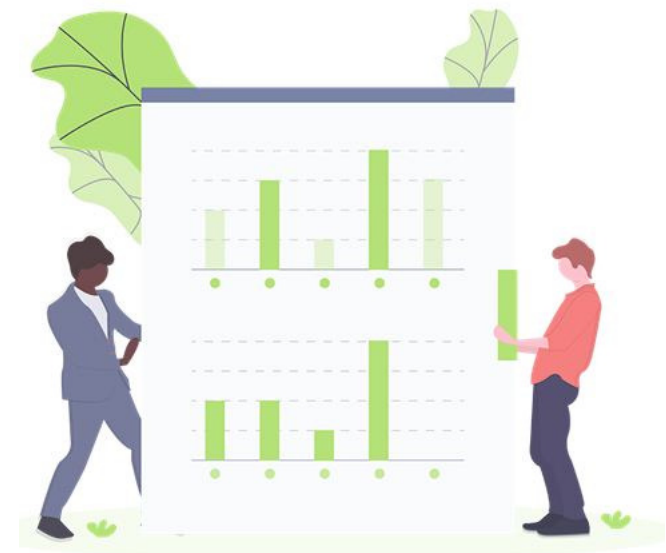

(Thank you for define your presentation or talking order !)

Almost all of you considered the aspects suggested last week ?

How do you solve the problems?

Next week it must be completely presented as
in a submission for a real conference ...
(there are minimum and maximum numbers the pages for all of them)

So

Remember:

Let's get ready to have a **full-length version of something** that could actually be a work in a week;

Ok ? !

Remember, also that a paper

Must have:

- Title ;
- Abstract ;
- Introduction ;
- Objectives (hypotheses and thesis followed) ;
- Exposition of what have been done (simplifications) ;
- What was achieved (and was not , as well) ;
- Discussion and conclusion (with ideas for continuations) ; and
- Bibliographical references

Much better **to do a little bit of each part**, but having a complete work then stress only one aspect and do not finish.....

And:

You must be as clear as possible when reporting it (no body read intentions do not **declared in the paper** !)
