"Arquitetura de Distribuição de Informação de Gerência de Redes de Telecomunicações Baseada na Arquitetura Corba"

The objective of this dissertation is to propose a Distributed Information Management Architecture to TMN (Telecommunication Management Network) CORBA based through F interface. The concepts, requirements and objectives of the GIRS (Integrated Management Networks and Services) and TMN are shown so that the structure of the SIGRS (Integrated Management Networks and Services System) can be understood and needs a Distributed Information Management Architecture. CORBA facilitates building graphical interfaces to management systems Web based to Telecommunication World.
